

splunk> Consulting Services

Splunk can be an invaluable tool for your organization to provide powerful insights for years to come. However, installing, configuring, and optimizing Splunk for your environment can be challenging. With VisiCore's certified Splunk architects at your disposal, these tasks become a snap. VisiCore offers consulting services for Splunk including jump start, design and architecture, custom application development, managed instances, use case expansion and training. In addition, VisiCore is proud to have achieved Splunk's Professional Services Provider Partner status.

Our Services:

- **Splunk Jumpstart:** VisiCore's Splunk Jumpstart service is tailored to clients who know what they want to get out of Splunk, but aren't certain how to configure Splunk within their environment. Once VisiCore is engaged for this typically 2 week offering, we work with your engineers to ensure Splunk is seamlessly integrated within your environment. This service minimizes the time your staff must devote to implementation and configuration and reduces MTTV (mean time to value) for your organization.
- **Splunk Design and Architecture:** Splunk Design and Architecture services offer clients the expertise of Splunk Certified Architects who bring years of combined Splunk experience and can provide clients with the know-how and expertise to deliver a fully optimized Splunk implementation without the need to hire a full-time Splunk Architect.
- **Splunk Migration Services:** Several of our clients have previously implemented Splunk within their environment, but preferred to offload the costs and risks associated with an on-premises environment in favor of a cloud implementation. They lacked the staff and expertise to complete the migration. Enter VisiCore's Splunk Migration Services. Clients benefit from VisiCore's proven migration methodologies, minimizing associated risks of a complex migration. Whether AWS, Azure, GovCloud, or other private cloud environments, VisiCore is the partner to ensure your migration is a professional and secure one.

- **Splunk Managed Services:** Organizations desire the benefits of a Splunk deployment, but fear the risks associated with maintaining a complex environment and/or compliance requirements prevent them from pursuing a cloud solution. VisiCore's Splunk Managed Services provide management for the entire Splunk environment within your on-premise or cloud environment. VisiCore provides all implementation and configuration services, as well as daily operations and maintenance. Additionally, VisiCore handles the creation of dashboards, reports, and applications which frees up your staff to take action on the valuable insights gained from Splunk.
- **Application Development:** Some of the apps available from Splunk are either incomplete for your requirements or require days of configuration to get to a useable state. VisiCore's technologists boast over 15 years of experience in a wide variety of technology disciplines. This places VisiCore in the unique position to be able to quickly identify where the value lies in your logs/data, allowing us to create apps tailored to your organization's needs. VisiCore can create Splunk apps or troubleshoot existing ones.
- **Use Case Expansion:** Often times with Splunk implementations, other departments want to take advantage of this powerful tool. Many times, due to the somewhat complex nature of crafting apps and dashboards, there is no resource available to get the project started. With VisiCore's Use Case Expansion consulting services, we allow clients to quickly analyze use case expansion opportunities including risks, effort and viability.
- **Training Services:** Training is essential to the success of your Splunk deployment. VisiCore's Splunk Certified Architects have the experience and expertise to provide training to maximize your investment. VisiCore provides education on the most efficient methods for searches, how to glean meaningful information from apps and dashboards, dashboard creation, as well as other custom training. Focused training can prove invaluable with the successful integration of your Splunk implementation.

Benefits

- **Expert Guidance for Your Splunk Enterprise Deployment:** Receive a professionally architected Splunk environment without the added cost and hassle of becoming Splunk certified.
- **Quicker Time-To-Value:** Rather than spending your engineer's time installing, securing and configuring an intricate product, you can quickly demonstrate the benefits of VisiCore's Splunk Expertise. You will be operational in your secure environment within 2 weeks or less, allowing you to experience the full power of your logs/information sooner.
- **Architect for the Future:** Ensure your Splunk Enterprise architecture is up to the task of supporting and growing with your business.
- **Onboard Data Sources, Reliably:** Rely on VisiCore to provide a repeatable and reliable process for onboarding data securely to ensure you are getting the logs/information required, when you want them and how you need them.
- **Working Together:** VisiCore ensures success by working side-by-side with you and your resources throughout the project to create a team that continues well past initial deployment.
